Subject: sqlite.sch syntax with multiple tables
Posted by wilho on Mon, 27 Feb 2006 22:20:34 GMT

I'd be gratefull if someone could give me an example of sch -file with multiple tables specified.
Seems that I can't create one properly.

```
TABLE_(SIMPLE_TEST1)
  INT_    (ID) PRIMARY_KEY
  STRING_  (NAME, 200)
  STRING_  (LASTNAME, 200)
  INT_    (BDATE)
END_TABLE
TABLE_(SIMPLE_TEST2)
  INT_    (ID) PRIMARY_KEY
  STRING_  (NAME, 200)
  STRING_  (LASTNAME, 200)
  INT_    (BDATE)
END_TABLE
```

won't work
