QtCurve fixed.

Quick fix:

CtrlLib/ChGtk.cpp 826

```
if(!popup) {  
    gtk_widget_style_get(bar, "shadow_type", &shadowtype, NULL);  
    GtkWidget *item = gtk_menu_item_new();  
    gtk_menu_shell_append(GTK_MENU_SHELL(bar), item);  
    gtk_widget_realize(item);  
    popup = gtk_menu_new();  
    gtk_menu_item_set_submenu(GTK_MENU_ITEM(item), popup);  
    gtk_widget_realize(popup);  
    GTK_MENU_SHELL(bar)->active = true;  
}
```

(Some day I will make those doubled scrollbar arrows work too
