Dear UPP experts,  
Happy New Year!

I tried Clipboard() in HomeBudget:

=====

.....  
categories.WhenInsertRow = THISBACK(InsertCategory);

.....  
categories.Appending().Removing().Editing().Clipboard();

.....

===== =

But When copy any multiple rows, only one row data can be done when "paste as Appended".  
The SQL statement in recorded file show the data in cell are NULL:  
"SQL\* insert into CATEGORIES(GR\_ID, NAME, DEFVALUE, PM, INNEWMONTH) values (4,  
NULL, NULL, -1, 0)..."

Maybe it's a UPP bug?

I also noticed that the Paste and write to SQLite3 function can be coded as follows:

=====

```
void gridctrl::Paste(int mode)
{
if(!clipboard)
return;
Gridclipboard gc = Getclipboard();
if(gc.data.IsEmpty())
```

.....

=====

But what is the name(XXX) of the CALLBACK I can use like below:  
categories.XXX = THISBACK1(Paste,a);

Thanks in Advance.
