Well there are basically two ways to do it. If you want to apply a custom style to a specific button, you can use a function like this one:

```
void SetCustomStyle(Button &btn)
{
    static Button::Style style = btn.StyleNormal();
    //do stuff with it
    btn.SetStyle(style);
}
```

Or if you wish to change the global "skin" of all buttons, look over the Chameleon package in the reference nest.
