Subject: XML Parser has no support for DTD

Hi!

I noticed that the XML parser has absolutely no support for DTD.

Example:

```
<?xml version="1.0"?>
<!DOCTYPE note [
  <!ELEMENT note (to,from,heading,body)>
  <!ELEMENT to     (#PCDATA)>
  <!ELEMENT from    (#PCDATA)>
  <!ELEMENT heading (#PCDATA)>
  <!ELEMENT body    (#PCDATA)>
]>
<note>
  <to>Tove</to>
  <from>Jani</from>
  <heading>Reminder</heading>
  <body>Don't forget me this weekend</body>
</note>
```

I need this to be recognized, so I'm going to add this functionality. If you are going to add it ASAP, then I'll wait. If not, maybe I can contribute it.
