1. Why uvs2 is not shipped with upp installation package, not on upp sourceforge, not on U++ webpages (or am I blind?) ?

Because we are feeling guilty about it...

4. Guilty of what? Comunist system inheritance? I still remember uvs2 from my short experience that it is nicely useable with thelde. A product which potentially could promote U++ or at least to be appreciated by "ugly stupid uneducated" U++ users like me, or to be a starting point for new versions developements.

Well, I have been told that Uvs2 is a bad idea so many times that I started to believe it

Anyway, reason 2 why it is not "public" is limited bandwidth of my home ftp server.

U++ would be in front of "ugly fatty stupid wxWidgets" and not "unknown, deleted and once again scheduled for deletion from "half-porn" origins Wikipedia -

http://business.timesonline.co.uk/tol/business/industry_sect_ors/media/article774973.ece. But that's separate topics.

Already tried that. Does not work.

Quote:

So, any chance to overcome that guilt and put uvs2 into e.g sourceforge uppdev tree?

It is in uppbox (together with other developer tools, like releaser).

2. What if to combine uvs2(3?) (thelde?, too?) and mercurial.

One suggested plan was to make uvs3 as smart frontend to svn.
