So, branches are discouraged "not only by political but also by technical centralized autocratic upp project management nature and the version control unfriendliness"? like during good Soviet times

So, only not very skilled users are welcome.

I can not agree...

I think, the main advantages of U++ are it's very clean design and clean source code.
The result of allowing a lot of developers writing the repository can be a hacked unstable trash. Just compare the development methods of some died projects to some flourishing projects.

You can write clean code, fitting into the concepts of UPP and it can be part of it (my observation).

I'm not talking about "to write to the main (Mirek's) branch".

I'm talking about a mechanism which would enable quite average c++ programmers to be encouraged and empowered to contribute and, more importantly, to exchange U++ patches or branches in a more effective way than to post and search on forums!!!
