mrjt wrote on Fri, 11 January 2008 04:54Nice one.

And you are correct, there was no check for withopen/canopen. I've attached a copy of TreeCtrl.cpp (modified from SVN revision 89) that includes both fixes.

My changes:

TreeCtrl::Clear() - Root node now has canopen = true by default.

TreeCtrl::Open() - Check for canopen added. Nodes can still be closed even with canopen = false.

Thanks, patch applied.

Mirek
