Subject: Automagic default extension with multiple file types [FEATURE REQUEST]
Posted by nixnixnix on Tue, 15 Jan 2008 15:53:03 GMT

Hi Mirek,

I have a dialog that gets setup like this

```
FileSel dlg;
dlg.Type("ESRI Shape files","*.shp");
dlg.Type("Google Earth files","*.kml");

if(!dlg.ExecuteSaveAs("Export Lines"))
  return;
...
```

and I would like the dialog to set the default extension depending on the currently active file type.
Is there already a way to do this please? Is it something you think would be good to add?

Cheers,

Nick
