Having said that, it is possible to get something aproximating this. I've attached a quick demo, its got bugs and you'll have to excuse my icons as I'm shit at drawing .

Hi James,

I've seen that feature in your code in the past, then disappeared in the next releases. Is there some reason? I found it very useful to help the user in positioning the tab... just the look need to be improved as you pointed out, but I like the overall effect.

Luigi
