Subject: Look of MenuBar dependent on position of calls

I noticed something strange: when creating a menu, if you change the order of MenuBar::Set and TopWindow::AddFrame, the menu looks differently. If it has a submenu it even looks nice, so I guess this is intentional.

But if it doesn't have a submenu, the text is not centered.

I think such things should not be dependent on the order of calls. To see what I mean, run Gui07 and edit:

```
MyAppWindow() {  
    Title("My application with menu").Sizeable();  
  
    menu.Set(THISBACK(MainMenu)); // this was after the next one  
    AddFrame(menu);  
}
```
