Quote:It means that this toolkit is unusable for me (and for many people because i don't know why somebody wants atof to work with comma....)

Did you try to use atof in a normal gcc "Hello World" program, outside of U++, to see if it behaves the same way? And did you try to use ftoa to see if it generates a string with a ','?

And the only reason I would like to use ',' is because I was though like this in school (a long time ago).
