Quote:Using this skin, all U++ applications lock up after a time, except the IDE. You can load up any app, and after playing a lot with the interface and especially dragging other windows on top of the U++ application freezes it. I noticed that if you put your cursor over the window border buttons, the are not animated, like in other apps, and almost inevitably freeze the application again. Also, windows have text which is not visible when window is focused. And the strangest part is, TheIDE is immune to these issues. Window caption is present and buttons are animated. Does U++ touch window drawing. Does TheIDE have some extra code for it's windows?

Quote:Again, on my home XP, this issue does not appear.

Good news (can be bad news actually, depending on how you see it). I managed to reproduce in a non-reliable way the issue under XP too. Same skin, same problem, TheIDE still not affected. But I did manage to lock up TheIDE just once, when it was running and I changed the system skin while TheIDE was running an application.
