Subject: Re: Some feature requests
Posted by gertwin on Fri, 25 Jan 2008 11:54:23 GMT

Are there plans for implementing (some of) these features?

I like to add some request:

- Drag and drop of variables from the editor to the watch/explorer window.
Drag and drop to the explorer window works but it moves the text and not copies it (i can use ctrl but moving text uit of the edit window?).

- Pointing at a variable in the editor in debug mode pops up a tooltip with the value.

- When text is selected in the editor the text is copied into the search field of the find dialogs and help topic.

- Ability to search in the help topic text.
