mdelfede wrote on Fri, 25 January 2008 05:49I'm making a plugin for code reformatting, based on Astyle.

I already changed code in Astyle to use NTL instead of STL, I'll test it this week end.

I want to put patched Astyle in 'plugins' folder and make some additions to theide... it's right to do so ?

And... how can I save user settings in order to have them loaded when ide starts ?

Ciao

Max

Well, it would be fun to do so without Astyle, but yes, you are on the right track.

Configs: TheIDE has two configurations: "global" and "main package specific". Adding things is easy; see

```
void Ide::SerializeWorkspace(Stream& s);
```

and

```
void Ide::Serialize(Stream& s);
```

but even better approach might be using modular serialization (which is later included), see

```
ide/OutputMode.cpp
```

or

```
ide/laydes/laywin.cpp
```
