sergeynikitin wrote on Fri, 25 January 2008 19:39 One more small question.

Of course, I can find the answer himself.

In russian standarts Date fields must start from day, followed by month, and at end must be year.  
And .(period) must be as divider.  
(for example 29.12.2008)

May be exist ready solution to make Date Entry field under our standards.

Thanks.

Yes. You have to switch to

```
SetLanguage(LNG_('R','U','R','U'))
```

at the start of program.
