Compiling examples with:
GUI NOGTK GCC FORCE_SPEED LINUX

first had link error, dl library wasn`t found. After some googling in WWW and in this forum, removed linking this library in Draw package. Then I have link error reporting that freetype library isn`t found. I searched available packages and installed everything containing freetype libs, but still no way to find it. After removing this library from list through Package organizer, I had numerous link errors where a number of libraries were not found: pthread, png, stdc++, ...

Exact original message was:
/usr/bin/ld: cannot find -lfreetype
collect2: ld returned 1 exit status

OS: Mandriva Linux 2007.1 Spring
U++: 2007.1

P.S. Removing NOGTK flak makes linking the same sorces without any problems. But I want to learn to be able to write non-GTK U++ stuff.
