mdelfede wrote on Wed, 30 January 2008 10:28 Well, looking for printer drivers howto I stumbled on this one :

<http://www.linux-foundation.org/en/LSB>

It looks quite interesting in order to deploy a single binary package that 'should' run on all major distros.

In synthesis, LSB describes a minimal software environment that all LSB compliant distros should have; apps should be compiled and DYNAMICALLY linked \*only\* with that environment; libs and stuffs that are outside should be statically linked.

In the OpenPrinting site stays a detailed explanation of how it works, aimed to provide an environment for universal printer drivers :

<http://www.linux-foundation.org/en/OpenPrinting/WritingAndPackagingPrinterDrivers>

I think it's worth to take a look at those !

Ciao

Max

Well, I had big hopes for LSB.... 4 years ago.

Mirek
