string: No such file or directory

how can <string> not be found? (to simplify it, i've commented all source body out)

Well, the file in which you are including <string> is a C file. I tried either including <string.h>, either changing the extension to .cpp. Both lead to successful compile.

I'm not sure if standard headers which don't end in h are properly set up to be included in C programs. It is a C++ standard anyway.
