---

Example:

```
#include <CtrlLib/CtrlLib.h>
```

```
using namespace Upp;
```

```
struct App : TopWindow {  
    FileIn    tiff;  
    One<StreamRaster> raster;  
    int       pageno;
```

```
    virtual bool Key(dword key, int) {  
        if(key == K_PAGEUP && pageno > 0) {  
            pageno--;  
            Refresh();  
        }  
        if(key == K_PAGEDOWN && pageno < raster->GetPageCount() - 1) {  
            pageno++;  
            Refresh();  
        }  
        return true;  
    }  
}
```

```
    virtual void Paint(Draw& w) {  
        ImageEncoder t;  
        raster->SeekPage(pageno);  
        Rescale(t, GetSize(), *raster, raster->GetSize());  
        w.DrawImage(0, 0, t);  
    }  
}
```

```
App() {  
    Sizeable().Zoomable();  
    tiff.Open("e:/fax.tif");  
    raster = StreamRaster::OpenAny(tiff);  
    pageno = 0;  
}  
};
```

```
GUI_APP_MAIN  
{  
    App().Run();  
}
```
