Hmmmmm... with which version of theide are you building that ?

It remembers me a problem occurred using an old stable release...

Check uppsrc/ide/ide.iml file if it's still there (i.e. not blanked). If it's wiped out, try to install ide from svn deb package first.

Or, if you prefer so, try the following :

- 1 - close ide.iml file in theide (if not, it gets opened on next ide run....)
- 2 - refetch svn
- 3 - rebuild, without opening 'ide.iml' file on older ide release.

On my case, the latest stable ide had problems loading new image files (.impl) wiping them out.

Ciao

Max
