
Subject: [BUG??] Blitz issue

I made a change in my code, which was simply to remove a line that looked like:

```
LOG( "My log text here" );
```

When I recompiled (with Blitz), the program executed as if this line was never removed. I tried adding a new LOG line to the program (Eg. LOG("New log text");) and it still printed the old LOG text to the file. It worked as expected after taking off Blitz and recompiling.

Would the fact that LOG is a macro have anything to do with Blitz not recompiling the modified code?
