I am planning to add internationalization support and (actually, it does have support; all I have to do is to add a *.t file -- I'm a bit lazy nowadays Embarassed)

Well, It's time to rise and shine. I have added the *.t translation file to the SVN tree too.

From now on, DockCtrl has internationalization support. At the moment, only English and Turkish.

I need help for translations (there are only 15-20 lines to translate, so it shouldn't be time consuming)...

Here I upload the translation file. Any help will be appreciated.
Thank you.

Regards
