do not spend so long time figuring it out, just ask me to clarify next time. i've already been grateful.

First

GetKey(l.GetIndex())

is (almost) the same as

~l

(but AFAIK, l.GetIndex can return -1, which will crash here).

Second, I start to realize the problem. Yes, "GetIndex" in fact searches for the first key that is equal. Solution is simple - do not put equal keys into DropList

You can solve your problem by adding separate mapping array (keys are then indicies to this array).
