
Subject: Detect connection, valid URL, 404 page

If I try to load a file that does not exists on the server then the http server returns 404 page. In this case HttpClient returns no error so I search returned buffer for 404 inside <TITLE> tag.

- 1) Is there any better way how to detect that file does not exists on the server?
- 2) How to detect non-existing server? (Another way that wait for timeout).
