Quote:This is how qt docking system works. And Visual Studio too.
The version of VS I have installed (VS Express 2005) works like this (I just checked):
Drag title bar: Detached/move whole window including all tabs
Drag a tab: Detach single tab
Drag a tab with SHIFT key: rearrange tabs

The Qt demo I have (version 4.x, but not the most recent):
Drag title bar: Detaches a single tab
Drag a tab: Does nothing
Drag a tab with SHIFT key: Does nothing (also CTRL does nothing)
Also, Qt doesn't seem to have the ability to detach a whole collection of tabs (hence why dragging the handle undocks only one tab). I don't have much experience beyond looking at some of the source with the Qt system though, so please correct me if I'm wrong.

I think we have it right personally.
