One way could be:

RichText clip=txText.CopyText(0,MAXINT); //Get text

txText.Clear(); //Clear RichEdit

//Insert some empty lines on the top of the text

txText.PasteText(clip); //Put text again on the RichText

But during the PasteText it appends an extra "return" key on the end of the text, this means that for each PasteText it appends a new paragraph. Why append a new empty paragraph during the PasteText?

Alex
