Hmm. It used to work, but then I foolishly didn't test the current SVN version on Linux before uploading it.

Oblivion wrote on Wed, 27 February 2008 00:031. Add DockWindow::NoCenter() to the constructor of your dockable window's base class.

2. Open() the dockable window (or was it a container?) with no-owner.

Thanks! I've been trying to avoid the Window auto-centering for ages, I can't believe I missed NoCenter!

Quote:And another bug in your code (the latest one with transparent tab) I've encountered is regarding to your autohide code. Autohide a dock and try the autohide button or menu item when it is shown (in autohide mode). The framework will crash.

Fixed.

Cheers!
