If the info popup (gets displayed when the text won't fit in the column) is opening and NoBackground is set, Null is being used for it's background. Test package attached.

The fix is simple:

```
void ArrayCtrl::SyncInfo()
{
    if((HasMouse() || info.HasMouse()) && !IsEdit() && popupex) {
        Point p = GetMouseViewPos();
        Point c;
        c.y = GetLineAt(p.y + sb);
        if(c.y >= 0) {
            for(c.x = 0; c.x < column.GetCount(); c.x++) {
                Rect r = GetCellRect(c.y, c.x);
                if(r.Contains(p)) {
                    if(!IsCtrl(c.y, c.x)) {
                        int cm = column[c.x].margin;
                        if(cm < 0)
                            cm = header.Tab(header.FindIndex(c.x)).GetMargin();
                        dword st;
                        Color fg, bg;
                        Value q;
                        const Display& d = GetCellInfo(c.y, c.x, HasFocusDeep(), q, fg, bg, st);
                        info.Set(this, r, q, &d, fg, bg ? bg : SColorPaper, st, cm); // <<< Check bg isn't Null
                    }
                }
            }
        }
        info.Cancel();
    }
}
```

Tested on both MSVC8 & MingW.
