
Subject: Can't set value in switch with EnableValue

I'm trying to set a switch option from a database which stores an string (which is the value for the switch as I set them first).

This is the code:

```
UserEditWindow::UserEditWindow(String sel)
{
    CtrlLayout(*this, sel == "" ? "Nuevo Usuario" : "Editar Usuario " + sel);

    pwd.Password(true);
    optUserClass.Set(0, "ROOT", "Root (Administrador, privilegios totales)");
    optUserClass.Set(1, "FULL", "Full (Usuario completo, puede realizar altas)");
    optUserClass.Set(2, "CONSULTA", "Consulta (Restringido a realizar consultas)");

    if (sel == "")
    {
        editing = false;
        optUserClass.EnableValue("ROOT");
    }
    else
    {
        editing = true;

        // llenar campos

        Sql sql((*G_STATE->GetPsqlSession()));
        loginName = sel;
        realName.SetData(sql % Select(NOMBRE).From(OPERADOR).Where(LOGIN == sel));
        pwd.SetData(sql % Select(PASSWORD).From(OPERADOR).Where(LOGIN == sel));
        optUserClass.EnableValue(sql % Select(CLASE).From(OPERADOR).Where(LOGIN == sel));
    }

    // registra callbacks

    btnCancel.WhenAction = THISBACK(Close);
    btnOk.WhenAction = THISBACK(Save);
}
```

The line:

```
optUserClass.EnableValue(sql % Select(CLASE).From(OPERADOR).Where(LOGIN == sel));
```

it's where where the data is retrieved from the DB to set the switch value (and I retrieve the correct data, strings such as ROOT,FULL,CONSULTA are taken OK from the DB table).

I don't know why this does not work, since i'm setting the related values-text at first.

Thx for your help.
