kodos wrote on Sun, 02 March 2008 11:14Hi,

I have found one or two bugs in the function CPU\_Cores() under Win32.

1)

The for loop in the 32 bit version of the function should only run through 32 times not 64 times.

Correct and fixed (but actually not a bug, it worked).

Quote:

2)

Shouldn't we use the ProcessAffinityMask instead of the SystemAffinityMask to get the available cores?

Maybe... Should these be the same in most cases?

Mirek
