Mindtraveller wrote on Thu, 28 February 2008 19:09I've got StaticText control, which is working as some kind of labelled status indicator (picture+text).

Picture is PNG-image from .iml file, with alpha-channel.

So I write following code, and this picture is drawn on black background:

Am I doing something wrong, or it`s a bug?

"underdevelopment". Never counted with transparent Images yet.

Quick fix:

RichText/ParaPaint.cpp 141

Quote:

```
Image RichObjectImageMaker::Make() const
```

```
{  
    ImageDraw iw(sz);  
    iw.DrawRect(sz, White);  
    object.Paint(iw, sz);  
    return iw;  
}
```

(It is not 100% correct, we should use current paper instead, but that fix is more difficult).
