
Subject: Images in menus causing enormous padding

Hi.

I'm doing a menu-manager that creates menus from loaded XML files and all is fine and dandy except for when adding image to the menu after loading it from file:

```
bar.Add(title,THISBACK1(MyCallback,name)).Image(image);
```

The image appears in the menu alright, but even though the menu image itself becomes very small (fitting for a menu item), the space around it is as big as the original image when it comes to height.

It looks like this (@ is the image):

```
---+-----+
| |Menu item 1 |
+---+-----+
| |           |
| |           |
| @|Menu item 2 |
| |           |
| |           |
+---+-----+
```

Anyone know how this can happen or how to solve it?
