Subject: How to get and set window placement information?

Hi,

How do I get and set TopWindow placement information? I'm attempting to save and then on next program launch restore the window position and normal / minimize / maximize / fullscreen status of the window. The flags are clearly available from TopWindow::IsMinimized() etc. but the position acquired with GetRect() simply returns the current size even if the window is maximized.

Are there member functions for setting and getting the "normal" (i.e. not minimized or maximized) window rect?
