mrjt wrote on Thu, 06 March 2008 12:29See TopWindow::SerializePlacement().

Thanks, but unfortunately the TopWindow::SerializePlacement() appears to use the SetRect/GetRect in the standard way and is not able to store the "normal" i.e. restored rect size if the window is maximized or minimized when saving data through SerializePlacement(). You can see this if you try to normalize = restore the window after loading a maximized window placement using SerializePlacement().

So, the question remains: Are there member functions for setting and getting the "normal" (i.e. not minimized or maximized) window rect?
