Well, I would like to investigate this a bit more to be sure it is not U++ problem.

Can you create a simple test case to demonstrate the issue please?

Sure.

The program should create 4 files. 2 pdf files and 2 svg files. You can see the error in the
"svg_DrawingDraw.svg" file. When you remove the "////" comments from the file "SvgDraw.cpp"
that file should be the same ass the other svg file and also look identical to the pdf output.

I traced it back to the wsDrawEllipse function in Draw/Drawing.cpp:452 to the DrawingPos
parameter which is different, but I don't know why .
