In current implementation (last beta), if user selects more than one rows (in multiselect mode), "Delete row" deletes only one of the selected rows.

I would change this code from

```
bool ArrayCtrl::DoRemove()
```

```
{
    if(IsReadOnly()) return false;
    if(!IsCursor() || askremove && !PromptOKCancel(RowFormat(t_("Do you really want to delete the
selected %s ?"))))
        return false;
    Remove(cursor);
    WhenArrayAction();
    return true;
}
```

to

```
bool ArrayCtrl::DoRemove()
```

```
{
    if(IsReadOnly()) return false;
    if(!IsCursor() || askremove && !PromptOKCancel(RowFormat(t_("Do you really want to delete the
selected %s ?"))))
        return false;
    if(multiselect) {
        for(int i=GetCount()-1; i>=0; i--){
            if(IsSelected(i)){
                Remove(i);
            }
        }
    }
    else
        Remove(cursor);
    WhenArrayAction();
    return true;
}
```
