luzr wrote on Mon, 10 March 2008 09:02Hi,

I have just noticed interesting problem (IMO).

It might be an issue of my tinkering with my new ubuntu server, but I believe that the right for usr/share/upp[-svn] are not set correctly. If I log as another user than the one that installed U++, I cannot access the content of directories.

Not quite sure what is problem, but I think this requires further investigation.

Mirek

mhhhh.... you mean that you can't READ or that you can't WRITE /usr/share/upp contents ?
Im my PC permission allows reading for all people, and writing only to whom installed stuff, what is indeed incorrect as files should belong to root and not to user.
Because of that the files are copied in home dir on first ide launch.
So, in either case the problem is there; if you can't read files, that's a urgent one, if you can't just write/delete files in /usr/share, that's not a big problem.
The right way should be indeed to make /usr/share/upp files owned by root and public readable.
