
Subject: Use ArrayCtrl or GridCtrl for new application?

It is not obvious to me how to make a selection of using ArrayCtrl or GridCtrl in a new application.

GridCtrl lacks in documentation is one factor, but not the most important one.

ArrayCtrl can interface to a database, but I'm not using a database.

My application requires 15-20 rows by 6 columns.
Each cell must be editable.
Column 1 is EditString ctrl
Column 2 - 5 is EditDouble ctrl
Column 6 is EditString ctrl

This is a touchscreen application where double click does not exist.

Is there a superiority of one type of control over the other?
