Frst post so Hi to all.

As the thread suggests, a newbie - though previously attempted to use c++ without any success.

Chanced upon Ultimate++ so decided to give things another go.

I have tried to build UWord from the included examples in forece_speed mode, the completed app runs but crashes when trying to save a file.

The error from the windows report is Offset: 00277542

Using the debug mode it builds and saves OK, is it possible to use the spped mode to create finished exe files?

I would also like to switch to using the MSC8 build mode but this just generates errors when trying to build, what are the settings to use this feature?

The SDK is inside Microsoft Visual Studio 8/SDK

C++ 2005 Express installed.

Any help and beginneers tips gratefully appreciated.
