Subject: DropList bug when removing last item

Hi,

when you remove an item from a DropList it normally selects the first item in the DropList, but if that Item was the last one it won't update the screen, you have to click on the DropList and that it will update itself.

I have attached a test case.

BTW: If I use the Assist++ to view the available methods from the DropList class it doesn't show me the Remove(int i) method.
