Hello folks,

I am using U++ 2007.1 at WIN2K. I wanted to try the SDL example from the folder "examples".

First i have ned to correct the path `#ifdef PLATFORM_WIN32`

`#include <SDL.h>` to `#ifdef PLATFORM_WIN32`

`#include <C:\upp\sdl\include\SDL.h>`. Then it still complained it would not find the

"sdl.dll":Linking...

c++.exe: SDL.dll: No such file or directory

I have found that file on C:/upp/sdl/lib/sdl.dll. I have tried to add this path in "Project / Main Package configuration", but did not succeed. I have also added the packages "Core, Draw, SdlExample".

Obvious i need to tell the path of the *.dll, but don't know where. Can someone give me a pointer?

kind greets

amando
