Subject: SDL sample needs *.dll
Posted by amando1957 on Mon, 17 Mar 2008 18:47:40 GMT

Hello folks,

I am using U++ 2007.1 at WIN2K. I wanted to try the SDL example from the folder "examples".
First i have ned to correct the path #ifdef PLATFORM_WIN32
#include <SDL.h> to #ifdef PLATFORM_WIN32
#include <C:\upp\sdl\include/SDL.h>. Then it still complained it would not find the
"sdl.dll":Linking...
c++.exe: SDL.dll: No such file or directory

I have found that file on C:/upp/sdl/lib/sdl.dll. I have tried to add this path in "Project / Main
Package configuration", but did not succeed. I have also added the packages "Core, Draw,
SdlExample".

Obvious i need to tell the path of the *.dll, but don't know where. Can someone give me a pointer?

kind greets
amando
