XVT_rocks wrote on Mon, 17 March 2008 18:52Hi guys,

Love your site, very well done, great information.

One thing seemed glaringly lacking--I'd love to see you do a comparison of U++ and XVT, another C/C++ cross Platform Development Toolkit. It has been around for a very long time. Current version is 5.8. It can be downloaded and evaluated for free for 30 days. (Yes, it is a commercial product, and yes, I work there. But heck, I'm glad to see more competitors providing solutions. Go for it guys!)

see www.xvt.com

First time I hear about it.

```
void CPokerWin::DoCommand( long theCommand, void * theData )
{
 switch( theCommand )
 {
```

is all I need to know

Mirek
