Here debian packages for the 2008.2beta :

32 bit : [http://www.ultimatepp.org/svnbuidls/upp-beta_2008.2beta_i386 .deb](http://www.ultimatepp.org/svnbuidls/upp-beta_2008.2beta_i386.deb)

64 bit : [http://www.ultimatepp.org/svnbuidls/upp-beta_2008.2beta_amd6 4.deb](http://www.ultimatepp.org/svnbuidls/upp-beta_2008.2beta_amd64.deb)

It will be installed separated from stable and svn packages, in

`/usr/share/upp-beta/`

with user copy of packages proposed as

`~/upp-beta`

and ide executable name as `theide-beta`

So, you can test/use without clobbering your working stable setups.

Ciao

Max
