I went on the mingw site and downloaded their installer. Then I choose a candidate version to install in c:\upp\mingw.
I compiled and everything was ok but my app from 3.4 mb is now 3.8. The previous upp I used was a 2007.12. I do not know if my app became bigger because of the new 2008 version or due to the new compiler (5.1.3)
