You shouldn't need to modify UppSrc, all you need is:

- A Duration class with operators to/from int, operators >, < etc. (just convert to int and compare)
- A custom Convert class/Edit ctrl

Since most of this is copying from existing code it really isn't much work, see attached.

Tolnt/FromInt could probably be improved, and you may wish to add Null support.

## **ilfranks**

Not as simple as just a new typedef as stated earlier: typedef EditMinMax<Time, ConvertDuration> EditDur;

More is involved.

I did say that you had to define a new Convert class, which is where all the work is done. It's possible, but perhaps not the best solution.
