Also, from <http://www.spiderweblogic.com/HTML-Meta-Tag-Generator.aspx>

Quote:

DONT get your site banned by not knowing the proper techniques!

...

HTML meta tags should contain words and phrases that are also found in the Title tag, the H1 tag, and is in the page Body content. Higher frequency of the keywords in all these other locations in addition to the meta tags increases the change of it coming up on searches.

...

(Some, like GOOGLE, do ignore keywords, but using keywords effectively can help your ratings on several search engines.)

from [upp.sourceforge index.html](#):

Quote:<META NAME="keywords" CONTENT="framework, toolkit, widget, c++, visual, studio, dev-cpp, builder, ide, class, component,wxwidgets, qt, rapid, application, development, rad, mfc, linux, gui, sdl, directx, desktop"/><meta

Unfortunately, in the page you will not find any of these:

- 1 dev-cpp
- 2 builder
- 3 ide,
- 4 rad,
- 5 qt
- 6 widget
- 7 class
- 8 wxwidgets
- 9 mfc
- 10 framework
- 11 component
- 12 directx
- 13 desktop

from 23.
