luzr wrote on Mon, 24 March 2008 20:14I have just noticed sf.net now supports wiki for projects.

Should not we use it instead?

Wiki which are hosted on sf are primitive, but good enough to store info we need. I believe we have some advantages making that move:
- the maintainer will be one from dev team
- spammers are not interested anymore
- save space from upp server
- ...

I agree with you.
P.S: Don't forget to update links on all pages.
