luzr wrote on Sat, 29 March 2008 16:44OK, looks like I have found the workaround, so consider this fixed.

Well, in the process I had to refactor the whole Font infrastructure too, because workaround made it too slow...

(Fix is too scattered to be posted here).

Mirek

Thank you! I'll wait until it makes it to SVN version and check it out. I'm really curious about how such an issue appears and how it can be fixed. Does it work under Linux too?

PS: I'll ask again: how do you get the real name of the StdFont()?
